

RESOURCE OPPORTUNITIES

...Discovering value in natural resource stocks

Romios Gold (RG-TSXV)

The following editorial is extracted from the February 2007-2 issue

Romios Gold has planned an aggressive C\$5 million exploration program that will begin this June and will include ground geophysics, mapping, prospecting, soil and rock geochemistry and 5000 meters of diamond drilling. Most of the work will occur in the northwest zone of the Newmont Lake property where earlier drilling outlined a 200,000 ounces gold resource. Drilling is also planned for the Trek property to access the copper and gold mineralization found in geochemical work.

Romios is working in a high potential area of northwestern B.C. that includes Galore Creek. By focusing on the discovery of a smaller, higher grade zones at Newmont Lake, Romios plans to avoid the high capital costs that caused problems at Galore Creek. This year's program will focus on areas within

reach of existing roads. The coming summer exploration program will be an important time for Romios, and at this price the company offers a lot of upside potential.

Price February 28, 2008: C\$0.35

Shares Outstanding: 65.73 million

Shares Fully Diluted: 82.66 million

Market Cap: C\$27.6 million
